

Pressure Transmitter

PTMk

With piezoresistive measuring cell, compact version
Pressure ranges 0 – 100 mbar to 0 – 1000 bar

Applications

Pressure transmitter models PTMk are suitable for overpressure and absolute pressure measurement of liquid and gaseous media from 0 – 100 mbar up to 0 – 1000 bar, which do neither corrode stainless steel 316L (1.4404 and 1.4435) nor Viton. They stand out due to their compact construction type. Two basic versions are available:

Overpressure	0 – 100 mbar to 0 – 1000 bar (up to 0 – 16 bar with ventilation to atmosphere)
Absolute pressure (a)	0 – 100 mbar to 0 – 1000 bar (reference point zero absolute)

The pressure transmitters are temperature-compensated and provide a calibrated output signal.

Construction

The piezoresistive sensor is installed in the pressure connection piece and is surrounded by silicone oil. It is separated from the medium by a thin stainless steel diaphragm. The earth conductor of the plug connector is connected to the case. The attachment of chemical seals, e.g. for the food industry, is possible, see data sheets of catalogue heading 7...
