

Mechanical Pressure Measurement

L u m e n G a u g e

The **L u m e n G a u g e** version is designed to quickly and reliably identify whether the operating pressure of a process plant is within the normal range in case of insufficient lighting, at night or in the event of a sudden power failure.

For this purpose, the **L u m e n G a u g e** is equipped with a luminescent dial, a reflective pointer tip and two adjustable reflective marks. When illuminated with a flashlight, the position of the pointer between the marks can be seen even at greater distances.

When charged with a flashlight, with ambient light or daylight, the dial will glow in the dark for a certain period of time. This glow effect is beneficial in safety-relevant and critical areas of a process plant allowing technicians to monitor the operating pressure while carrying out their maintenance tasks.

Features

- ◆ Luminescent dial
- ◆ Black pointer with silver reflecting coating
- ◆ Green reflecting marks

Available Devices

- ◆ NCS 100 (4")
- ◆ NCS 160 (6")
- ◆ NCS 4 1/2"
- ◆ Also with case filling

Application Fields

- ◆ Chemical plants
- ◆ Crude oil and natural gas installations
- ◆ Pipelines
- ◆ Poorly lit plant interiors
- ◆ Process equipment with areas difficult to access

visible – even in complete darkness
